Quizlet.

exam circulatory respiratory guide Flashcards and Study ...

The circulatory or cardiovascular system's ability to deliver oxygen throughout the body depends on proper functioning of the respiratory system. The

interactions between the cardiovascular and respiratory systems are best demonstrated by following the path of a red blood cell starting in the heart and

traveling through the lungs.

The Respiratory and Circulatory System in the Human Body ...

The main purpose of the circulatory system is to transport blood, oxygen, nutrients, and hormones to and from different cells and tissues throughout the

body. This system works hand-in-hand with the respiratory system to facilitate the exchange of oxygen and carbon dioxide within the blood per the alveoli

in the lungs.

Study Guide to the Systems of the Body

____ 2. Where in the respiratory system does gas exchange occur? a. in the heart b. in the alveoli c. in the pharynx d. in the trachea ____ 3. The role of the

respiratory system is to bring what substance into the body? a. water b. oxygen c. carbon dioxide d. red blood cells ____ 4.
